Selected evidence | Other evidence

Agent #1 · ar	مرحبا، معك [NAME] من خدمة العملاء، كيف بقدر أساعدك؟	
Customer #2 · mixed	أهلين، الفاتورة هالشهر طالعة 45 دينار، وأنا my plan is only 20 JD.	
Agent #3 · ar	بعتذر منك. ممكن رقم الخط لو سمحت؟	
Customer #4 · ar	[PHONE]	
Agent #5 · mixed	تمام، شايف إنه في roaming charges من الأسبوع الماضي.	
Customer #6 · ar	بس أنا ما سافرت أبداً! هاد غلط منكم.	
Agent #7 · ar	معك حق، رح أرفع طلب استرجاع وبيوصلك الرصيد خلال ٣ أيام عمل.	
Customer #8 · en	Okay, but I want a confirmation SMS.	
Agent #9 · ar	أكيد، رح توصلك رسالة اليوم.	

Grounded claims

2 of 6 decided

Commitment · turn 7 · chars 259–309
Refund credited within 3 business days
"رح أرفع طلب استرجاع وبيوصلك الرصيد خلال ٣ أيام عمل"
Confirm | Correct | Reject

Commitment · turn 9 · chars 354–374
Confirmation SMS sent today
"رح توصلك رسالة اليوم"
Confirm | Correct | Reject

Compliance · turn 3 · chars 130–152
Identity checked by line number only
"ممكن رقم الخط لو سمحت؟"
Confirm | Correct | Reject

Rubric · Empathy 4/5 · turn 3 · chars 119–129
Apologised before troubleshooting
"بعتذر منك."
Confirm | Correct | Reject

Rubric · Diagnosis 5/5 · turn 5 · chars 167–212
Found the disputed charge
"شايف إنه في roaming charges من الأسبوع الماضي"
Confirm | Correct | Reject

Sentiment · turn 6 · chars 214–250
Negative peak: customer disputes the charge
"بس أنا ما سافرت أبداً! هاد غلط منكم."
Confirm | Correct | Reject

Rejected by grounding · 3

The model claimed these, but the quote does not appear verbatim in the transcript. They were dropped and are never shown as findings.

Agent offered a discount on next bill
~~"رح نعطيك خصم عالفاتورة الجاية"~~

Customer threatened to cancel
~~"I will cancel my line"~~

Agent explained the roaming policy
~~"سياسة التجوال بتنص على"~~

Memory rules used for this call · 2

`R-014` In Jordanian dialect, "بيوصلك ... خلال" plus a time span is a commitment with a deadline.

`R-022` Asking only for the line number does not count as identity verification.

Submit review and resume run

Every claim needs a verdict. Corrections become candidate rules for later calls.

Analyze a new call

Upload a recording. It is transcribed on this machine, redacted, then analyzed. Low-confidence results go to the review queue.

Drop a call recording here

Rule memory

Rules induced from reviewer corrections and retrieved into later analyses. When a new rule contradicts an existing one, it is held here and never applied until a person decides.

Conflicts 11 | Active rules 35

ar	en	mixed
8 active rules	9 active rules	18 active rules

- K-01 ar — Is the line number enough to verify identity?
- K-02 mixed — Does "بحاول" count as a commitment?
- K-03 mixed — Deadline for "بكرا" when the call is after 6 pm
- K-04 en — Hold without asking permission
- K-05 mixed — Code-switched apology as empathy
- K-06 mixed — Refund promise without a ticket number
- K-07 en — Callback "later today"
- K-08 mixed — Transfer counts as resolution?
- K-09 mixed — Offer of SMS confirmation
- K-10 mixed — Data-bundle upsell during a complaint
- K-11 mixed — Customer name in greeting

CONFLICT K-01 · similarity 0.84 · opposite verdicts

Is the line number enough to verify identity?

EXISTING · R-022

Asking only for the line number does not count as identity verification.

From 4 corrections · used in 37 analyses

PROPOSED · held, not applied

Confirming the line number counts as identity verification for billing questions.

From correction on `call_0118_ar` by qa-lina

Resolution

- **Keep existing** — discard proposal
- **Keep new** — retire existing
- **Keep both** — scope by context
- **Discard** — neither applies

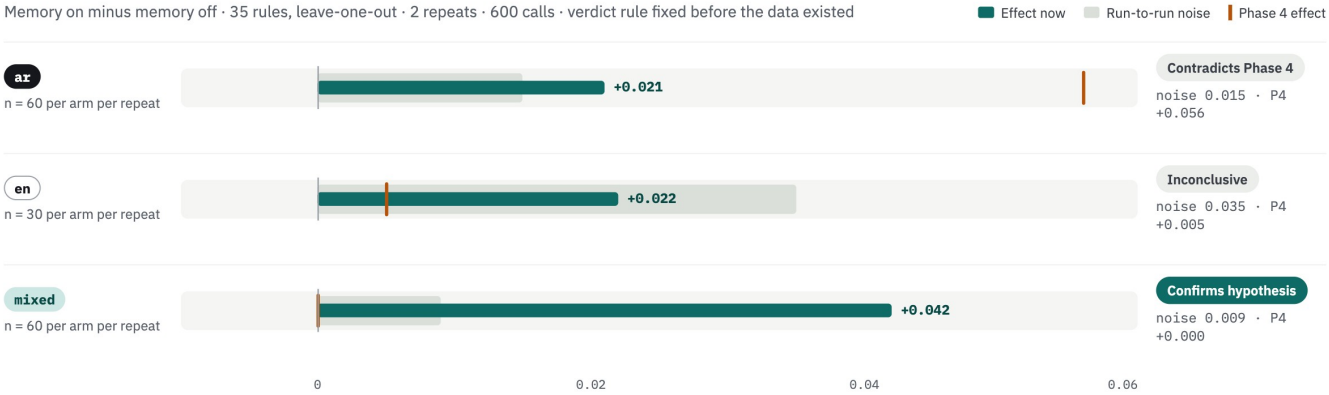

Resolve conflict

What the measurements say

Every number here is per language, with its sample size and the hardware it ran on. Nothing is blended across languages.

Does rule memory improve accuracy?

Memory on minus memory off · 35 rules, leave-one-out · 2 repeats · 600 calls · verdict rule fixed before the data existed

Fixing rule consolidation (single- to complete-linkage) recovered a memory effect on **code-switched** calls that Phase 4 measured as zero. The Arabic gain in Phase 4 came mostly from one unusual batch.

Cloud vs self-hosted serving

~10×
throughput with 16 calls in flight vs 1, same GPU and model
vLLM + adapter · Kaggle T4×2 · n = 15 and 45

$6–7
per 1,000 calls at 16 in flight, vs $67–100 one at a time
priced as a rented 2×T4 · actual spend $0

8.1 s
Gemini median latency (p95 69.4 s)
cloud API · n = 14, one sleep-affected call excluded

3 / 45
schema failures at 16 in flight: whitespace loops under guided decoding
fix proposed as a separate measured run

Per arm, language: Code-switched — ar | en | mixed

ARM	HARDWARE	ACCURACY	SCHEMA-VALID	LATENCY	COST / 1,000 CALLS	DATA EGRESS
Gemini 3.5 flash-lite	Cloud API	[value]	[value]	p50 8.1 s	[priced as paid]	Transcript → Google
vLLM + adapter · 1 in flight	Kaggle T4×2	[value]	14 / 15	~5 min	$67–100	None on own hardware *
vLLM + adapter · 16 in flight	Kaggle T4×2	[value]	42 / 45	[value]	$6–7	None on own hardware *
vLLM base Qwen3-8B · 16 in flight	Kaggle T4×2	[value]	[value]	[value]	[value]	None on own hardware *
HF transformers + adapter · 1	Kaggle T4×2	[value]	retries on 3 / 3	~9 min	[value]	None on own hardware *

Bracketed cells are filled from GET `/results`. Costs are priced as if paid (actual spend $0 on free tiers). * Kaggle is itself a third party in this benchmark; zero egress applies to running the same server on your own hardware. All calls are synthetic and redacted.
